1 INTRODUCTION

1.1 Background

Meath County Council proposed to amend the 5 Local Area Plans for Ashbourne, Drogheda Southern Environ, Dunboyne/Clonee/Pace, Dunshaughlin and Dunshaughlin.

Proposed variations to land use plans must undergo a formal “test” or “screening” to see if they would have likely significant effects on specific sites designated for their nature conservation importance. These sites are those designated under the European Commission’s Natura 2000 network of sites. These sites are designated on the basis of the presence of certain habitats and species that are deemed to be of international importance.

The EC Habitats and Birds Directives are the framework for the designation of these sites. The EC Habitats Directive requires the “screening” of plans and projects under Article 6(3). If the screening process results in a judgement that likely significant effects may occur or cannot be ruled out, then a more detailed ‘appropriate assessment’ (AA) is required. Whilst the structure of this assessment process is not laid down in law, there are guidance documents that are used to provide and indication of how this assessment may be carried out. This Report has been prepared in accordance with the national and international guidance.

In order to ensure that the proposed amended Local Area Plan complies fully with the requirements of Article 6 of the Habitats Directive and all relevant Irish transposing legislation (Planning and Development (Amendment) Act 2011), Meath County Council appointed Brady Shipman Martin and Scott Cawley Ltd to prepare the relevant documentation to allow them to carry out the screening of the proposed amendments to see if they required an AA and carry out this assessment if required.

1.2 Aim of this Report

The aims of this report are to:

- to identify the Natura 2000 network within the “zone of influence” of the proposed variation;
- to identify the linkages between the sensitivities of the individual European sites and the implications of the proposed variation;
- to determine if the implementation of the proposed variation could result in likely significant effects on the Natura 2000 sites in terms of impacts on their sensitivities (i.e. screening).

This Report will be used by Meath County Council to carry out their own AA Screening and to come to a conclusion as to the presence/absence of a risk of significant effects on the European sites.
2 OVERVIEW OF THE PROPOSED VARIATION

2.1 Meath County Development Plan 2013-2019

Meath County Council adopted the Meath County Development Plan 2013 – 2019 on 17th December 2012 and it took effect from 22nd January 2013. The County Development Plan sets out a vision and an overall strategy for the proper planning and sustainable development of the County for a six-year period. It also sets out guiding policies and objectives for the development of the County in terms of physical growth and renewal, economic, social and cultural activity, and most critically for SEA, for protecting and enhancing local assets by preserving the quality of the landscape, open space, natural, architectural, archaeological and cultural heritage and material assets. The County Development Plan takes account of various national and regional strategies and guidelines and also reflects consultation with statutory bodies, the general public and other interested bodies.

2.2 Scope of the LAP Amendment Process

Meath County Council proposed to amend the 5 Local Area Plans for Ashbourne, Drogheda Southern Environ, Dunboyne/Clonee/Pace, Dunshaughlin and Dunshaughlin and placed these amendments on public display for a 6 week period.

This process follows on from the making of Variation 2 of the Meath County Development Plan 2013-2019 in May of 2014, which introduced land use zoning objectives and an order of priority for the release of lands (residential land evaluation) in the Dunshaughlin LAP area.

The introduction of the land use zoning objectives was required pursuant to the Core Strategy objectives contained in the adopted County Development Plan. The land use zoning objectives for the 5 urban centres (including Dunshaughlin) had previously been contained in their respective Local Area Plans. Variation No. 2 also included the introduction of policies and objectives for each urban centre following the undertaking of a Strategic Flood Risk Assessment and Management Plan to inform same.

The Land Use Zoning Objectives and Map, together with the Additional Policies & Objectives and Residential Land Evaluation for the Dunshaughlin LAP area have already been subject to Strategic Environmental Assessment and Appropriate Assessment as part of the making of Variation 2 to the Meath County Development Plan, May 2014.

Under Variation 2, the land use zoning objectives map identified the lands required to accommodate the household allocation required to meet the provisions under the Core Strategy. The land evaluation that took place for Dunshaughlin under Variation 2 is based on a sequential approach to urban expansion, which ensures that development will be directed in the first instance to lands closest to the town centre and adjacent to the built up area of the town. In this context, the requirement for any further release of residential zoned land in Dunshaughlin will be assessed following the making of the next County Development Plan in line with the population projections contained therein.

The proposed amendments to the 5 LAPs will now ensure that they are consistent with the Development Plan, as varied. The land use zoning objectives map for Dunshaughlin as included in the proposed amendments is replicated from Volume 5 of the Meath County Development Plan.
2013 – 2019 as introduced by Variation No. 2, referred to above. **No changes to the land use zoning objectives can occur as part of this LAP amendment process.**

Therefore, the objective of this amendment process is to ensure consistency between the Dunshaughlin Local Area Plan (and other 4 LAPS) and the County Development Plan, as varied.

The scope of the proposed amendments was to:

- **Update the narrative / commentary provided in each Local Area Plan to reflect the changes in policy direction contained in the 2013-2019 County Development Plan and 2010-2022 Regional Planning Guidelines (both of which have been adopted since the Local Area Plans were prepared and adopted in 2009), reflect the 2011 Census of Population results, and update school enrolment figures, etc.**

- **Amend the policy direction contained in each Local Area Plan to reflect the revisions to the land use zoning objectives and phasing (Order of Priority) now contained in the County Development Plan for each centre and any other amendment required to ensure consistency with the County Development Plan. This also relates to changes arising from the Strategic Flood Risk Assessment and Management Plan.**

The existing Dunshaughlin Local Area Plan 2009-2015 was subject to screening for Appropriate Assessment prior to its adoption. The current AA screening applied to the proposed amendments in isolation and also in the context of any changes that have occurred to the baseline environment since the previous AA Screening was undertaken.

In accordance with best practice in the Appropriate Assessment of plans, the screening stage is carried out prior to the final drafting of the objectives and policies. This is to allow the objectives and policies to be devised to take into account the relevant environmental safeguards that may be required to avoid posing an adverse impact on the Natura 2000 sites. The Screening Stage is therefore based upon the following documents:

- Land use zoning maps within current Local Area Plans;
- Policies and Objectives within current Local Area Plans;
- Stage 1 Appropriate Assessment Reports for the Dunshaughlin Local Area Plan 2009-2015

A Screening Report was issued alongside the proposed Amendment No. 1 on 4th November 2014. Submissions were then received on the proposed Amendment No.1 and a Chief Executive’s report covering the submissions on all five Local Area Plans was published on 3rd February 2015. Proposed alterations to the Amendment were scrutinised for the need to undertake an Appropriate Assessment.

The proposed alterations comprised the following:

- Strategic Policy SP 1 (iii): Inclusion of New Policy in relation to extant planning permissions.
- LAP Objective RI 9: Minor change in relation to date of publication of NRA Guidelines.
- Objective WS – 2: Minor change re. reference to Irish Water.
- Objective WS – 5: Inclusion of new objective – water supply.
- Objective WWT – 1: Minor change re. separate foul and surface water drainage systems.
- Objective SWM – 1: Minor change re. separate foul and surface water drainage systems.
- Policy FP-6: Inclusion of new objective – flood risk.
- Objective DPRC3: Amendment and addition of text of Interchange and accompanying transport assessments.

No likely significant effects on European sites as a result of these alterations were identified and as such, the Amendment was adopted on 2nd March 2015. This Screening Report is published alongside the adopted amended LAP and is accompanied by an AA Screening Determination issued by Meath County Council, the competent authority in this case.

2.3 Dunshaughlin – The Plan Area

The current Local Area Plan (LAP) for Dunshaughlin, which was subject to AA Screening, dates from 2009. Subject to limitations set out under Sub-section 1.3 Scope of the LAP Amendment Process (above), Meath County Council now proposes to amend the LAP for Dunshaughlin. The boundary for the amended Local Area Plan is as provided on the land use zoning map for Dunshaughlin introduced to the County Development Plan via Variation No. 2 in May 2014.

3 METHODOLOGY

3.1 Formal Guidance

The Screening stage has taken account of guidance contained in the following documents:

3.2 Sources of Information Used

Sources of information relied upon are listed below:

- Ordnance Survey of Ireland mapping and aerial photography available from www.osi.ie
- Online data available on Natura 2000 sites as held by the National Parks and Wildlife Service (NPWS) from www.npws.ie
- Information on water quality in the area available from www.epa.ie
- Information on the River Basin Districts from www.wfdireland.ie
- Information on soils, geology and hydrogeology in the area available from www.gsi.ie
4 SCREENING OF SITES

4.1 Identification of Natura 2000 sites

In accordance with the Department of Environment, Heritage and Local Government guidance (DoEHLG, 2010), an initial distance of 15km from Dunshaughlin was selected for consideration of Natura 2000 sites.

This distance was deemed to be sufficient to cover all likely significant effects which may arise from the implementation of the variation on European sites. Spatial boundary data on the Natura 2000 network were extracted from the NPWS website on 4th November 2013.

In addition to examining European sites, Natural Heritage Areas (NHAs) and proposed Natural Heritage Areas (pNHAs) which fall within 15km of Dunshaughlin were also examined. Although NHAs and pNHAs do not form part of the Natura 2000 Network, they often provide an important supporting role to the network, particularly when it comes to fauna species which often do not obey site boundaries. For example, a pNHA/NHA that provides regular feeding grounds for a population of Golden Plover for which a separate site is designated as an SPA plays a role in the maintenance of the species at favourable conservation status for that SPA. In other words, in that example, in order to protect the Natura 2000 network it may also be important to protect the pNHA/NHA which provides a supporting role to it. There are however, NHAs and pNHAs that are designated for features that are not important at an international level and may not interact with the Natura 2000 network.

All European sites which fall within 15km of Dunshaughlin are listed in Table 1 below. Table 2 lists the non-Natura 2000 sites.

<table>
<thead>

<tr>
<td>River Boyne and River Blackwater</td>
<td>River Boyne and River Blackwater</td>
</tr>
<tr>
<td>Rye Water Valley / Carton</td>
<td>None</td>
</tr>
</tbody>
</table>

All of these sites are presented on Figure 1. Whilst the Malahide Estuary cSAC and SPA is linked to the LAP area by the Broadmeadow River, it is 22km downstream of the site and is not deemed to be at risk as result of this distance and absence of activities in the LAP of a suitable scale and nature that would pose a risk to the European site at this distance.

### 4.2 Reasons For Designation, Site Sensitivities And Threats

In order to identify those sites that could be potentially affected, it was necessary to describe the Natura 2000 site in the context of why it has been designated (i.e. its “Qualifying Interests”) and the environmental and ecological conditions that maintain the condition of these features. The Qualifying Interests and threats to the sites were extracted from the NPWS website database ([www.npws.ie](http://www.npws.ie)). Threats to sites were also scoped during informal consultation with regional NPWS staff in January 2012 during the AA of the County Development Plan.

The results of this desktop exercise are presented in are listed in Table A1, Appendix A and illustrated in Figure 2a of the Meath County Development Plan Natura Impact Report, Volume IV. In order to identify those sites that could be potentially affected, it was necessary to describe the European Sites in the context of why it has been designated (its “Qualifying Interests”) and the environmental and ecological conditions that maintain the condition of these features. The Qualifying Interests and threats to the sites were extracted from the NPWS website database ([www.npws.ie](http://www.npws.ie)) in 2012 and 2013 as part of the AA of the Meath County Development Plan 2013-2019. The underpinning conditions that are required to maintain the ‘health’ of these features are listed in this table. Reference should be made to Appendix A to guide the reader. All Natura 2000 sites which fall within 15km of the County boundary are listed in Table 1, Volume IV and those that are within 15km of Dunshaughlin are duplicated below in Table 1 in this AA Screening Report. These sites are also displayed in Figure 2a, Volume IV of the NIS.

Table 3 presents the full list of qualifying interests that are contained within European sites located within 15km of the LAP. The underpinning conditions that are required to maintain the ‘health’ of these features are listed in this table.

**Table 3: Qualifying Interests in the Relevant European Sites and the underpinning environmental conditions.**

<table>
<thead>
<tr>
<th>Qualifying Interests</th>
<th>Key environmental conditions supporting site integrity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alkaline fens</td>
<td>High water table. Ground surface water supply. Calcium-rich conditions.</td>
</tr>
<tr>
<td>Alluvial forests with Alnus glutinosa and Fraxinus excelsior (Alno-Padion, Alnion incanae, Salicion albae)</td>
<td>Riparian/lacustrine habitat prone to flooding</td>
</tr>
<tr>
<td>Petrifying springs with tufa formation (Cratoneurion)</td>
<td>Calcium-rich, nutrient-poor groundwater/surface water supply.</td>
</tr>
</tbody>
</table>
The key output of this stage was the identification of the types of threats to the integrity of the European sites. These can then be related to the consequences of implementing the proposed variation to see if there is a risk of any likely significant effects.

The following generic threats to the European sites were identified and are listed below. It should be noted that many of these activities and their consequences would not be expected to result from the implementation of the proposed variation (e.g. motorways) due to the nature of the proposed land uses and the geographic location of the settlements concerned.

**Rural/Agricultural activities**
- Agricultural Intensification;
- Fertilisation;
- Restructuring agricultural land holdings;
- Forestry (afforestation/deforestation);
- Stock Feeding;
- Drainage/flooding;
- Pesticides, and;
- Peat Extraction.

**Economic and Infrastructural Development**
- Golf Courses;
- Roads, motorways;
- Sewage outflows;
- Housing developments;
- Communications Networks;
- Quarries;
- Canalisation;
- Landfill land reclamation;
- Disposal of household waste;
- River Channel Maintenance, and;
- Invasive Alien Species.

**Recreation and Leisure**
- Walking, horse riding and non-motorised vehicles; and;
- New Paths and Tracks.

The above list describes generic threats and does not take account of specific sensitivities at each European site. Section 5 presents the impact types that are deemed to be relevant to the amendment of the Dunshaughlin Local Area Plan 2009-2015.

Consultation of the NPWS Natura 2000 data forms and liaison with regional staff allowed site-specific sensitivities to be identified. These site-specific sensitivities are presented in the following sections.
5 IDENTIFICATION OF POTENTIAL LIKELY SIGNIFICANT EFFECTS

5.1 Likely Significant effects in isolation and combination

This section documents the final stage of the screening process. It used the information collected on the sensitivity of each Natura 2000 site and describes any likely significant effects of implementation of the proposed amendments. This assumes the absence of any controls, conditions or assumption of mitigation measures.

5.2 Potential linkages between the LAP and European Sites

Table 4 identifies the sensitivities of the qualifying interests for the European sites that are within 15km of the Dunshaughlin Local Area Plan boundary. It was clear that nearly all of the qualifying interests were influenced by changes to the aquatic environment. Therefore any changes that would result from the implementation of the LAP could transfer to the European sites.

Dunshaughlin straddles the watershed between the Boyne and the Broadmeadow River catchments. The Skane river drains the settlement to the west toward the Boyne whilst the Broadmeadow rises to the east and flows through Ratoath and Ashbourne.

Activities within the LAP that could theoretically give rise to impacts downstream include discharge of treated/untreated foul sewage to watercourses and abstraction from watercourses.

The current waste water treatment facilities for the town are provided in the Castletown/Tara Waste Water Treatment Works (within the Boyne catchment) which became operational in 2008. This facility has a population equivalent (p.e.) of 12,000 with a reserve capacity of 4,000 p.e. The inlet and outlets are designed for a p.e. of 18,000 if the need arises. It is estimated that the current population equivalent which is treated is of the order of 9,500 and includes the settlements of Kilmessan, Kiltale and Dunsany.

According to online environmental data held by the EPA, the receiving watercourse is regarded to be “slightly polluted”, and as of moderate water quality status (2007-2009) under the Water Framework Directive. However the main threats to the watercourse are agricultural inputs which are not within the influence of the Local Area Plan. Scrutiny of the Annual Environmental Reports for the WWTW did note several breaches of licence limits for certain environmental variable but all were detected and solved within a short period of time.

Construction works for a new Dunshaughlin Water Supply Scheme was completed in 2010. It has been designed to provide a secure water supply to the Dunshaughlin area capable of supplying the 2025 demand. The scheme is sourced from seven production wells that were recently drilled around Dunshaughlin village and has a 3,000 cu.m/day capacity accommodated in a new 42m high elevated water tower. This is an increase from the previous capacity of 1,200 cu.m/day. The Scheme also included for the laying of gravity mains to connect the water tower into the existing distribution network and for the upgrading of the existing distribution network. The projected scheme has a population equivalent of 14,000, including for commercial and employment uses. It is estimated that the existing demand on the scheme is of the order of 8,000 population equivalent. Protective Policy WS S07 in the Meath County Development Plan ensures that any additional loading on the water supply must undergo AA screening.
On the basis of this information, it was concluded that there was no real risk of significant effects on the integrity of the European sites.

In Table 5, likely significant effects of the proposed variation are presented both in isolation and potentially in combination with other plans.
Table 4: Likely Significant Effects of implementing the proposed Variation No 2 (in the absence of mitigation)

1 This list is not considered to be exhaustive.
5.3 Ecological Network Supporting European Site Integrity

An analysis of the proposed Natural Heritage Areas and designated Natural Heritage Areas in terms of their role in supporting the species using European sites was undertaken. It was assumed that these supporting roles mainly related to mobile fauna such as mammals and birds which may use pNHAs and NHAs as “stepping stones” between Natura 2000 sites.

Article 10 of the Habitats Directive and the Habitats Regulations 2011 place a high degree of importance on such non-Natura 2000 areas as features that connect the Natura 2000 network. Features such as ponds, woodlands and important hedgerows were taken into account during the rest of the AA process.

</tbody>
</table>

The screening of the proposed amendments involved the analysis of the proposed policies and objectives and where necessary, the inclusion of mitigation measures to ensure that the implementation of the proposed amendment does not result in adverse impacts on European sites. In doing so, there were several “protective” policies and objectives that existed within the County Development Plan (CDP) - whose specific function was to protect the integrity of the sites and the environmental conditions underpinning them. These were taken into account in the screening of the proposed amendments as these protective policies in the CDP could help to mitigate any potential impacts on designated sites.

Table 6 shows a summary of the Policies and Objectives contained within the Meath County Development Plan 2013-2019 which act cumulatively to protect the individual European sites. This list does not cover all of the Policies or Objectives of a protective or mitigatory nature but identifies those that address specific sensitivities of the sites.

7. INTERACTION WITH OTHER PLANS

The E.C. Habitats Directive and the Habitats Regulations 2011 require that the impacts on European sites be assessed from the plan or project in question and also in the presence of other plans and projects that could affect the same Natura 2000 sites.

The screening process identified other plans and projects that could act in combination with the Variation to pose likely significant effects on European sites. This Section identifies if these other Plans and Projects have undergone an appropriate assessment themselves as it is assumed that if a Plan has been adopted following an AA then it cannot pose likely significant adverse effects on European sites.

The cumulative/in-combination impact assessment focused on the other County Development Plans and Local Area Plans that had the highest potential to affect the same European sites that could be affected by the Variation. Other higher-level plans that could promote infrastructure are integrated within the County Development Plan 2013-2019 itself and have been assessed as such.

- Meath County Development Plan 2013-2019
  - The AA of the County Development has addressed many of the potential issues arising from the amended Local Area Plan. The implementation of the amended...
Local Area Plan will refer to the protective policies in the County Development Plan as a form of mitigation of potential effects on the European Sites. Therefore, assuming that both the County and Local Area Plan are implemented in accordance with the policies and objectives in both Plans then significant adverse effects on European sites will be avoided.

- **Louth County Development Plan 2009-2015**
  - The Boyne Estuary SPA, River Boyne and Blackwater cSAC and SPA are all shared by Louth and Meath. Policies have been assessed as part of a comprehensive appropriate assessment and changes made to protect these specific sites. As a result there are no predicted cumulative impacts from the implementation of this Plan.

- **Dublin City Development Plan 2011-2017**
  - There are no European sites shared by the two Counties. At the screening stage it was purported that there could be indirect impacts if bird populations in Meath SPAs and pNHAs were adversely affected (Shelduck, Black-tailed Godwit, Golden Plover and others).
  - Policies have been proposed to provide for protection of the coastal European sites in Dublin City that could share species with the River Nanny and Boyne Estuary sites in Meath. As a result there are no predicted cumulative impacts from the implementation of this Plan.

- **Eastern River Basin District Management Plan (2008)**
  - A review of the Article 6 Assessment indicated that the Measures proposed within the Plan are consistent with the mitigation policies within the LAP. Key issues such as buffer strips alongside rivers, control of invasive species, upgrade and capacity of wastewater treatment plants lend support for the Policies in the Plan.

- **Heritage Capital- Marketing Tourism in Meath 2005 – 2010**
  - Whilst the Strategy does not appear to have undergone any AA, there are several recommendations that overlap with protective Policies in the LAP. Proposals to protect the beaches from parking and to provide adequate parking whilst respecting the need to protect the designated sites, is one such example.
  - It is noted that this Strategy was prepared in the peak of the Celtic Tiger era and that pressures to develop hotel and leisure developments are no longer viable. Such developments could have posed a conflict with the protection of some European sites.

- **Regional Planning Guidelines for Greater Dublin Area 2010-2022**
  - Section 4.6 of the Habitats Directive Assessment of the Regional Planning Guidelines set out the mitigation measures that have been passed down into the current AA screening of the amended Local Area Plan. These include, but are not limited to:
    - GIP2; SIR6: Ensure that plans and projects relating to recreational, leisure or tourism activity which have the potential to negatively impact on European

---

2 [http://www.rpg.ie/](http://www.rpg.ie/)
sites undergo a HDA in the early stages of planning. Where mitigation is feasible, measures should be prescribed to actively manage visitor access and ensure that sensitive areas are protected. Where such measures are not feasible or uncertain, mitigation is through avoidance.

- **GIP2; GIP3; GIP4; PIR18; GIR21; GIR22, GIR23:** Ensure protection of coastal waters and coastal sites, which have been identified as particularly vulnerable to increased pressure, through integrated coastal zone management and early consideration of Article 6 requirements for all plans and projects potentially impacting on European site.

- **GIP2; FRI; FR4:** Ensure protection of Natura 2000 sites supporting rivers or streams by avoiding development on floodplains and ensure that flood risk assessment policies, plans or projects are compliant with Article 6 of the Habitats Directive and avoid or mitigate negative impacts on Natura 2000 sites.

- **Regional Planning Guidelines for the Border Region 2010-2022**
  - INFP 1, FRP3, ENVP 4, and ENVP 5: Ensure the protection of the Natura 2000 sites’ supporting rivers and streams by avoiding development in areas at risk from flooding, whilst facilitating the continued growth and expansion of the key urban settlements that are at risk from coastal or fluvial flooding. INFP 1, FRP 1, ENVP 4, and ENVP 5: Ensure that development and local area plans adopt a strategic approach to flood risk management to avoid any negative impacts on Natura 2000 sites. INFP 1, INFP 19, ENVP 4, and ENVP 5: Ensure that all plans and projects associated with the provision of water and sewerage facilities comply with the requirements of Article 6 of the Habitats Directive.

- **Draft Transport Strategy for Greater Dublin Area 2011-2030**
  - The Natura Impact Statement identified the potential for significant impacts on the River Boyne and Blackwater cSAC (SPA not designated at that time). It stated:
    “It is considered possible that general pressures on water quality in the Boyne and Blackwater catchments resulting from, agriculture, forestry, housing, industry, etc, in combination with any deterioration in water quality resulting from construction activity during construction of either the new Navan Rail Line or the Leinster Orbital Route, could potentially result in significant negative impacts on the cSAC and this needs to be taken account of in any Appropriate Assessment at project level”. It identified that the most effective mitigation for both of these transport impacts would be at the project level.

- **Meath Local Authorities Climate Change Strategy and Energy Management Action Plan 2011-2012**
  - The Plan has not undergone an AA but many of the proposed measures would combine with the measures proposed in the current Draft Local Area Plan to reduce the likelihood of any significant effects on the European sites. Many of the policies aiming for better water usage, increased energy efficiency, waste, housing and planning are directly compatible with the amended Local Area Plan.

---

8. SCREENING CONCLUSIONS

The Screening process has identified that three European sites were within 15km of the Dunshaughlin LAP boundary. All of these sites would be sensitive to changes in the aquatic environment. Analysis of the proposed amendments to the Local Area Plan did not highlight any policies or objectives that would pose a risk of likely significant effects to the integrity of the European sites in terms of both direct impacts in isolation and on a cumulative basis.

Dunshaughlin Local Area Plan Amendment No. 1

An Appropriate Assessment screening determination has been made by Meath County Council regarding Amendment No. 1 to the Dunshaughlin Local Area Plan.

This decision has been informed by information prepared by Scott Cawley Ltd. on behalf of the Council - Appropriate Assessment Screening Report dated April 30th 2015 and consideration of drawings and other information provided in the Amendment documentation. This AA Screening report described the nature of the proposed amendment, the nature of the European sites within the zone of influence of the LAP and the relationship between the two such that any impact pathways could be identified. It sets out the nature of the proposed works and assesses any potential for direct, indirect or cumulative impacts of the proposed works on all relevant European Sites.

The Council has examined likely significant effects of the proposed works on European Sites within the zone of influence of the proposed works, in light of the specific Qualifying Interests and conservation objectives of all relevant European Sites.

Having reviewed and considered this Appropriate Assessment Screening Report and general information on the nature of the amendment, the Council has been able to conclude that there was no likelihood of any significant effects on any European Sites arising from the proposed amendment, either alone or in combination with other plans or projects. The Council agrees with the Screening process that three European sites were within 15km of the Dunshaughlin LAP boundary. All of these sites would be sensitive to changes in the aquatic environment. Analysis of the proposed amendments to the Local Area Plan did not highlight any policies or objectives that would pose a risk of likely significant effects to the integrity of the European sites in terms of both direct impacts in isolation and on a cumulative basis.

Therefore it is our view, in relying on the information prepared by Scott Cawley and details in the amendment documentation, that an Appropriate Assessment is not required for the proposed amendment.
